TITLE: Maintaining independent states for multiple web browser instances

Summary of Invention Paragraph - BSTX (5):

[0004] Proxy servers or user preferences set in a Web browser can prevent the use of cookies. A technique for maintaining a Web browser state, which does not use cookies, is called "URL rewriting". As background, each <a href="http://www.html.new.nu.new.

Detail Description Paragraph - DETX (18):

[0041] A user at device 11 accesses the Web page published by Web server software 29 via Web browser 23. When the user clicks on the control feature, a new Web browser window opens. The new Web browser window may be opened using a JavaScript function, such as "window.open()". This function requests a Web page using the Web page URL and a session ID parameter. The request for the Web page is sent from Web browser 23 to server 19 via external network 15. In this embodiment, the request is an <a href="https://example.com/ht

2 Exploration of large image collections using virtual reality devices

window

Robert van Liere, Wim de Leeuw

November 1999 Proceedings of the 1999 workshop on new paradigms in information visualization and manipulation in conjunction with the eighth ACM internation conference on Information and knowledge management

Full text available: pdf(480.56 KB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, index terms

An image browser for the exploration of image collections is described The approach taken is to utilize VR input devices to develop more intuitive interaction metaphors that allow users to navigate through large collections of images. The browser presents query results as a strip of images and interaction with the strip is realized by interpreting the user's head movements. The browser is used as a front end to a visual information retrieval system.

Keywords: information visualization, virtual reality

3 Integrated document caching and prefetching in storage hierarchies based on Markovchain predictions

Achim Kraiss, Gerhard Weikum

August 1998 The VLDB Journal — The International Journal on Very Large Data Bases, Volume 7 Issue 3

Full text available: pdf(603.01 KB) Additional Information: full citation, abstract, citings, index terms

Large multimedia document archives may hold a major fraction of their data in tertiary storage libraries for cost reasons. This paper develops an integrated approach to the vertical data migration between the tertiary, secondary, and primary storage in that it reconciles

speculative prefetching, to mask the high latency of the tertiary storage, with the replacement policy of the document caches at the secondary and primary storage level, and also considers the interaction of these policies with ...

6 A hierarchical fair service curve algorithm for link-sharing, real-time and priority services

Ion Stoica, Hui Zhang, T. S. Eugene Ng

October 1997 ACM SIGCOMM Computer Communication Review, Proceedings of the ACM SIGCOMM '97 conference on Applications, technologies, architectures, and protocols for computer communication, Volume 27 Issue 4

Full text available: pdf(2.35 MB)

Additional Information: full citation, abstract, references, citings, index terms

In this paper, we study hierarchical resource management models and algorithms that support both link-sharing and guaranteed real-time services with decoupled delay (priority) and bandwidth allocation. We extend the service curve based QoS model, which defines both delay and bandwidth requirements of a class, to include fairness, which is important for the integration of real-time and hierarchical link-sharing services. The resulting Fair Service Curve link-sharing model formalizes the go ...

⁷ Enabling scalable online personalization on the Web

October 2000 Proceedings of the 2nd ACM conference on Electronic commerce

Full text available: 📆 pdf(491.69 KB) Additional Information: full citation, references, citings, index terms

A survey of routing techniques for mobile communications networks

S. Ramanathan, Martha Steenstrup October 1996 **Mobile Networks and Applications**, Volume 1 Issue 2

Full text available: pdf(276.88 KB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> <u>terms</u>

Mobile wireless networks pose interesting challenges for routing system design. To produce feasible routes in a mobile wireless network, a routing system must be able to accommodate roving users, changing network topology, and fluctuat- ing link quality. We discuss the impact of node mobility and wireless communication on routing system design, and we survey the set of techniques employed in or proposed for routing in mobile wireless networks.

9 A reliable multicast framework for light-weight sessions and application level framing Sally Floyd, Van Jacobson, Steve McCanne, Ching-Gung Liu, Lixia Zhang October 1995 ACM SIGCOMM Computer Communication Review, Proceedings of the conference on Applications, technologies, architectures, and protocols for computer communication, Volume 25 Issue 4

Full text available: 📆 pdf(1.67 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

This paper describes SRM (Scalable Reliable Multicast), a reliable multicast framework for application level framing and light-weight sessions. The algorithms of this framework are efficient, robust, and scale well to both very large networks and very large sessions. The framework has been prototyped in wb, a distributed whiteboard application, and has been extensively tested on a global scale with sessions ranging from a few to more than 1000 participants. The paper describes the principles tha ...

10 Client-server computing in mobile environments
Jin Jing, Abdelsalam Sumi Helal, Ahmed Elmagarmid
June 1999 ACM Computing Surveys (CSUR), Volume 31 Issue 2

Full text available: pdf(233.31 KB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> <u>terms</u>, <u>review</u>

Recent advances in wireless data networking and portable information appliances have engendered a new paradigm of computing, called mobile computing, in which users carrying portable devices have access to data and information services regardless of their physical location or movement behavior. In the meantime, research addressing information access in mobile environments has proliferated. In this survey, we provide a concrete framework and categorization of the various way ...

14 Third Generation Computer Systems

Peter J. Denning

December 1971 ACM Computing Surveys (CSUR), Volume 3 Issue 4

Full text available: pdf(3.52 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

The common features of third generation operating systems are surveyed from a general view, with emphasis on the common abstractions that constitute at least the basis for a "theory" of operating systems. Properties of specific systems are not discussed except where examples are useful. The technical aspects of issues and concepts are stressed, the nontechnical aspects mentioned only briefly. A perfunctory knowledge of third generation systems is presumed.

15 Distributed operating systems

Andrew S. Tanenbaum, Robbert Van Renesse

December 1985 ACM Computing Surveys (CSUR), Volume 17 Issue 4

Full text available: pdf(5.49 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> <u>terms</u>, <u>review</u>

Distributed operating systems have many aspects in common with centralized ones, but they also differ in certain ways. This paper is intended as an introduction to distributed operating systems, and especially to current university research about them. After a discussion of what constitutes a distributed operating system and how it is distinguished from a computer network, various key design issues are discussed. Then several examples of current research projects are examined in some detail ...

16 Tracking graphics state for networked rendering

Ian Buck, Greg Humphreys, Pat Hanrahan

August 2000 Proceedings of the ACM SIGGRAPH/EUROGRAPHICS workshop on Graphics hardware

Full text available: pdf(354.74 KB)

Additional Information: full citation, abstract, references, citings, index terms

As networks get faster, it becomes more feasible to render large data sets remotely. For example, it is useful to run large scientific simulations on remote compute servers but visualize the results of those simulations on one or more local displays. The WireGL project at Stanford is researching new techniques for rendering over a network. For many applications, we can render remotely over a gigabit network to a tiled display with little or no performance loss over running locally. One of t ...

17 4.2BSD and 4.3BSD as examples of the UNIX system

John S. Quarterman, Abraham Silberschatz, James L. Peterson December 1985 **ACM Computing Surveys (CSUR)**, Volume 17 Issue 4

Full text available: pdf(4.07 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms, review

This paper presents an in-depth examination of the 4.2 Berkeley Software Distribution, Virtual VAX-11 Version (4.2BSD), which is a version of the UNIX Time-Sharing System. There are notes throughout on 4.3BSD, the forthcoming system from the University of California at Berkeley. We trace the historical development of the UNIX system from its conception in 1969 until today, and describe the design principles that have guided this development. We then present the internal data structures and ...

18 A class of compatible cache consistency protocols and their support by the IEEE futurebus

P. Sweazey, A. J. Smith

June 1986 ACM SIGARCH Computer Architecture News, Proceedings of the 13th annual international symposium on Computer architecture, Volume 14 Issue 2

Full text available: pdf(1.05 MB)

Additional Information: <u>full citation</u>, <u>abstract</u>, <u>references</u>, <u>citings</u>, <u>index</u> terms

Standardization of a high performance blackplane bus, so that it can accommodate boards developed by different vendors, implies the need for a standardized cache consistency protocol. In this paper we define a class of compatible consistency protocols supported by the current IEEE Futurebus design. We refer to this class as the MOESI class of protocols; the term "MOESI" is derived from the names of the states. This class of protocols has the property that any system component ca ...

Predicting document access in large multimedia repositories

Margaret M. Recker, James E. Pitkow

December 1996 ACM Transactions on Computer-Human Interaction (TOCHI), Volume 3 Issue

Full text available: pdf(1.40 MB)

Additional Information: full citation, abstract, references, citings, index terms, review

Network-accessible multimedia databases, repositories, and libraries are proliferating at a rapid rate. A crucial problem for these repositories remains timely and appropriate document access. In this article, we borrow a model from psychological research on human memory, which has long studied retrieval of memory items based on frequency and recency rates of past item occurrences. Specifically, the model uses frequency and recency rates of prior document accesses to predict future document ...

² Papers: A survey of web caching schemes for the Internet

October 1999 ACM SIGCOMM Computer Communication Review, Volume 29 Issue 5

Full text available: pdf(1.15 MB)

Additional Information: full citation, abstract, references, citings

The World Wide Web can be considered as a large distributed information system that provides access to shared data objects. As one of the most popular applications currently running on the Internet, the World Wide Web is of an exponential growth in size, which results in network congestion and server overloading. Web caching has been recognized as one of the effective schemes to alleviate the service bottleneck and reduce the network traffic, thereby minimize the user access latency. In this pap ...

³ A caching and streaming framework for mulitmedia

Shantanu Paknikar, Mohan Kankanhalli, K. R. Ramakrishnan, S. H. Srinivasan, Lek Heng Ngoh October 2000 Proceedings of the eighth ACM international conference on Multimedia

Full text available: pdf(642.08 KB) Additional Information: full citation, abstract, references, citings, index terms

In this paper, we explore the convergence of the caching and streaming technologies for Internet multimedia. The paper describes a design for a streaming and caching architecture to be deployed on broadband networks. The basis of the work is the proposed Internet

standard, Real Time Streaming Protocol (RTSP), likely to be the *de-facto* standard for webbased A/V caching and streaming, in the near future. The proxies are all managed by an `Intelligent Agent' or `Broker' - t ...

Evaluating content management techniques for Web proxy caches Martin Arlitt, Ludmila Cherkasova, John Dilley, Rich Friedrich, Tai Jin March 2000 ACM SIGMETRICS Performance Evaluation Review, Volume 27 Issue 4

Full text available: pdf(996.69 KB) Additional Information: full citation, abstract, index terms

The continued growth of the World-Wide Web and the emergence of new end-user technologies such as cable modems necessitate the use of proxy caches to reduce latency, network traffic and Web server loads. Current Web proxy caches utilize simple replacement policies to determine which files to retain in the cache. We utilize a trace of client requests to a busy Web proxy in an ISP environment to evaluate the performance of several existing replacement policies and of two new, parameterless replace ...

5 Internet Web servers: workload characterization and performance implications
Martin F. Arlitt, Carey L. Williamson
